

A Message from Editor-in-Chief

Dear statistics community:

It is my pleasure and great privilege to make available to you the second issue of Volume 8, published in 2017 by the the Chilean Journal of Statistics, an official publication of the Chilean Statistical Society. Four papers are included in this issue. The first paper deals with analysis of single-index models with scale mixture of normals errors from a Bayesian perspective. The second paper considers a Bayesian method for estimation of two-parameters Weibull distributions for censored data. The third paper studies a family of mixture-scale distributions called epsilon Birnbaum-Saunders. The fourth paper introduces a continuous distribution called odd exponentiated half-logistic-G family.

I would like to thank the authors who honor us by choosing our journal to publish their research. I would also like to thank all anonymous reviewers and associate editors who contributed to maintain the quality standards of our journal.

Best regards to all,
Ronny Vallejos
Editor-in-Chief
Chilean Journal of Statistics
