

A Message from Editor-in-Chief

Dear statistics community:

It is my pleasure and great privilege to make available to you the first issue of Volume 9, published in 2018 by the the Chilean Journal of Statistics, an official publication of the Chilean Statistical Society. Five papers are included in this issue. The first paper deals with the impact of negative autocorrelation on frequency distributions. The second paper considers a method to estimate the change points in the Beer-Lambert law problems. The third paper studies a goodness of fit test for the Pareto distribution. The fourth article introduces a new distribution with bounded domain called unit Birbaum-Sanders distribution. Finally, the fifth article presents the chances that the teams participating in the 2018 World cup have to win the tournament, an approach based on Monte Carlo simulation.

I would like to thank the authors who honor us by choosing our journal to publish their research. I would also like to thank all the anonymous reviewers and associate editors who contributed to maintaining the quality standards of our journal.

Best regards to all,
Ronny Vallejos
Editor-in-Chief
Chilean Journal of Statistics
